SKILLS

ELECTRONICS & CODE
Arduino (C++), RFID, sensors
and motors

MAKING
FreeCAD, 3D printing, laser
cutting, fast mock-ups

WEB & DESIGN
HTML, CSS, JavaScript, Figma

3D & REAL-TIME
Blender, Unity

AI TOOLS
Claude Code: directing and
checking AI-assisted builds

LANGUAGES

Slovak · native

English · C1

Dutch · beginner

ALSO

Driving licence B

PROFILE

Multimedia & Creative Technologies student who likes the technical side most: making hardware, code and a physical object work together. I take an idea from sketch to a working prototype, test one part at a time before combining them, and say plainly what a prototype does and does not do yet. Two years of car-mechanic training before my studies taught me to find faults methodically and to work with my hands.

PROJECTS

Pinball machine

19 / 20

KdG · 2026 · team

A fully playable table built from scratch.

- My part: all of the code, the build and the wiring; a teammate did the design.
- Programmed the whole game on Arduino: flippers, targets, scoring, display and RFID.
- Built the parts with 3D printing and laser cutting, and wired the complete machine.

Shot dispenser

KdG · 2024–25 · solo

Cashless drinks for a festival: tap a bracelet, pay with credits, a pump pours one shot.

- Tested every component alone (LCD, pump through a transistor, level sensor, buzzer, RFID reader) before building the full circuit.
- 194-line Arduino sketch in small single-purpose functions; handles low balance, unknown tags and an empty tank.

Lost & Found locker

KdG · 2024–25

An RFID locker that returns a found item to its owner.

- Concept, build and code: reader, LCD, servo latch, LEDs and buzzer on an Arduino Uno.
- Documented what a real version would still need, such as persistent storage and a door sensor.

Websites: Grigor Studio, NIANA Bags

personal · live

- Designed in Figma and built with Claude Code: a videographer's portfolio and a bilingual (EN/SK) site for a handmade-bag label.
- My portfolio adds interactive simulations of the Arduino logic, backed by automated tests.

EDUCATION

Bachelor Multimedia & Creative Technologies

graduating 2027

Karel de Grote Hogeschool, Antwerp

Car mechanic training

2022 – 2024

Diagnosing and repairing vehicles: systematic fault-finding, mechanical and electrical work.

WORK

Restaurant, kitchen and till

Antwerp · 2024 – now

Two years alongside full-time studies: reliable under pressure, in a team, with guests in a second language.
